

#### 4. Write a program to demonstrate the use of thread group plugin in JMeter.

To use a thread group plugin in JMeter, you need to install the plugin first. To do this, go to the JMeter Plugins Manager and search for the plugin you want to install. Once you have found the plugin, click the Install button.

Once the plugin is installed, you can add a new thread group of that type by right-clicking on the Test Plan node and selecting Add > Threads > [Plugin Name].

For example, to add a Stepping Thread Group, you would right-click on the Test Plan node and select Add > Threads > Stepping Thread Group.

Once you have added a new thread group, you need to configure it. The configuration options will vary depending on the plugin you are using.
