

## 18. Write a program to demonstrate ForEach controller with regular expression extractor in JMeter

To demonstrate the ForEach Controller with regular expressions in JMeter, you can follow these steps:

Create a new JMeter Test Plan and add a Thread Group.

Under the Thread Group node, add a ForEach Controller.

In the ForEach Controller's properties dialog box, set the following:

Input variable: The name of the variable that contains the text that you want to extract the regular expressions from.

Match number: The number of matches that you want to extract.

Output variable name: The name of the variable that will contain the extracted values.

Regular expression: The regular expression that you want to use to extract the values.

Under the ForEach Controller node, add the samplers that you want to execute for each extracted value.

Run the test.
