9. Demonstrate how to work with variables in Postman.

To work with variables in Postman, you can create and use them in collections, environments, and requests.

Creating variables

To create a variable in Postman, follow these steps:

Click the Environments tab in the sidebar.

Click the + button to create a new environment.

Enter a name for your environment and click Create.

Click the Variables tab.

Click the Add button to create a new variable.

Enter a name and value for your variable.

Click Save.

You can also create variables in collections. To do this, follow these steps:

Click the Collections tab in the sidebar.

Open the collection where you want to create the variable.

Click the Variables tab.

Click the Add button to create a new variable.

Enter a name and value for your variable.

Click Save.
